

[HYALURONIC ACID]

Nature did it first.

Beauty is not made: it awakens, naturally.

Hyaluronic acid is a well-known component widely present in the skin's extracellular environment supporting its structures, refining its contours, preserving its quiet, natural youth. With time, this biological reserve declines.

Science is not cold: it reveals what nature has already written in you.

At Vivacy, we draw inspiration from what nature created first, from what your skin does best, to prolong its natural longevity and the beauty that is already yours.

INSPIRING SKIN.

EMPOWERING SCIENCE.

VIVACY[®]
PARIS

Regenerative medicine is redefining skin care, nurturing skin's capacity for natural repair and self-renewal.

VIVACY uses their expertise to develop innovative, expertly engineered solutions to support healthcare professionals in the field of regenerative skin science.

[Hyaluronic acid is an essential part of this regenerative process. It **hydrates, supports, structures, harmonizes and restores** the youthfulness that shapes the expression of each face.]

91% of patients are completely satisfied with the results of their hyaluronic acid injections¹

1. Survey conducted in September 2025 among 721 patients who had undergone at least one cosmetic procedure, including hyaluronic acid injections, in the previous 12 months.
